

NAME OF BORDERLINE PRODUCT**CANNABO****day cream****COMPOSITION**

50 ml CANNABO day cream contains natural cannabis extract which provides 50 mg CBD (Cannabidiol extracted from hemp plant).

WHAT IS CANNABO day cream AND WHAT IT IS USED FOR

CANNABO day cream contains cannabidiol (CBD), i.e. oil extract from hemp plant obtained by supercritical CO₂ extraction, with proven absence of herbicides and pesticides.

CANNABO day cream does not contain THC (9-delta tetrahydrocannabinol) i.e. contains a quantity lower than 0.2%.

CBD binds to the appropriate receptors on the skin's endocannabinoid system on the cells of the surface layer of the skin (epidermis), achieving an anti-inflammatory and soothing effect.

The skin of the face is directly exposed to the harmful influence of the external environment. Exposure to UV rays, polluted air and other stressful factors throughout the day leads to the creation of free radicals that accelerate the aging process of the skin and lead to the appearance of wrinkles, reduced skin tone and dry skin. CBD has antioxidant properties, neutralizes free radicals thus increasing skin resistance, reducing loss of moisture and premature skin aging.

Due to the antioxidant action of CBD, CANNABO day cream with CBD protects and detoxifies the skin, retains its moisture, smoothers wrinkles and strengthens the face contours. The introduction of innovative technology and the combination of CBD with delicate formulation enriched with collagen and hyaluronic acid quickly reduce the disadvantages for achieving a youthful appearance. CBD properties guarantee intense hydration of the skin and provide nutrients in perfect proportions.

CANNABO day cream is a combination of CBD with collagen, hyaluronic acid, vitamin E and panthenol. Collagen works against the signs of aging by smoothing out wrinkles and fine lines, redefining the contours and providing a more even skin tan. Hyaluronic acid retains skin moisture, visibly fills wrinkles and prevents formation of new ones, makes the skin firm and smooth to the touch and to look fresh and radiant. Vitamin E protects epidermal lipids, as well as collagen and elastic fibres of the skin from the harmful effects of the environment. Panthenol has a moisturizing and soothing effect, reduces redness and has an anti-inflammatory activity. The additional ingredients enhance the effect of the cream by stimulating the regeneration of the epidermis and correcting the deficiencies of the skin throughout the day.

INFORMATION FOR PROPER USE

CANNABO day cream protects the skin from the negative atmospheric effects, enables detoxification and better hydration, soothes and smoothers the skin, reduces wrinkles and irregularities, keeping the moisture throughout the day.

Skin should be cleaned before use.

Apply a small amount of the cream on the face skin with a massage. Apply the cream in the morning and during the day, as needed.
